

FLUID END

TLS 10

GD Energy Products' fluid ends are not just best-in-class — they're in a class of their own. The most critical part of a well-service pump, fluid ends are subjected to extreme stress and are a common source of failure. With a 40-year history of fluid end innovation, GD Energy Products considerably strengthens this weak link. Outperforming the competition and providing the lowest cost of ownership, GD Energy Products fluid ends deliver reliability, safety and peace of mind.

STANDARD FEATURES

- 42" long x 28" tall x 18.25" wide
3 inch longer, 1/2 inch taller and
1-5/16" taller suction deck
- Same internal components used in
the equivalent size SGWS except,
 - Stuffing Box
 - Plunger
 - Seal Carrier & D-Ring Seals
- Uses the Uni-Mount Flange
- Utilizes Falcon spring retainer
technology for enhanced
serviceability
- Optimized fluid end geometry to
minimize cross bore intersection
and suction deck stresses
- Field proven results are at least
double the life of the direct
competition with carbon steel fluid
end
- Field proven results with stainless
steel are 2-3x the life of the direct
competition
