

FLUID END

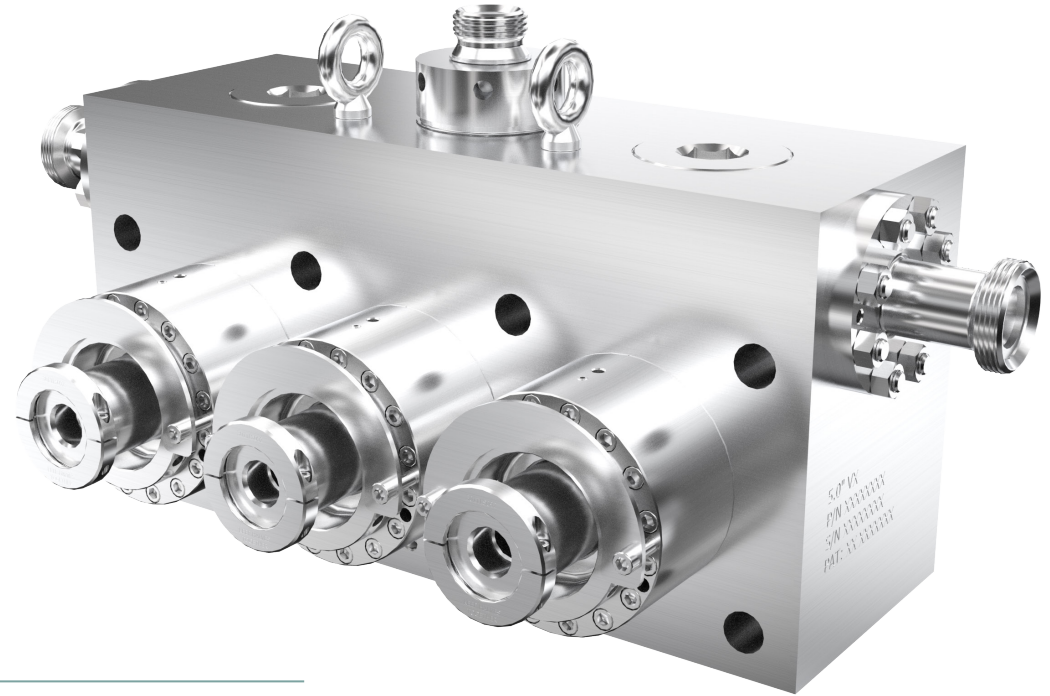

GD 3000 VX FLUID END

The GD 3000 VX Fluid End (VX) is a high value alternative to the standard SGWS fluid end and maintains a smaller forging and simplified external geometry. The VX weighs 500 lbs less than standard fluid ends but still provides equal or greater fatigue life, thread strength, and washout life to standard heavier fluid ends. Backed by GD Energy Product's legacy of product innovation and superior product quality, the VX is a combination of our highest performing components including Redline Consumables.

BEST-IN-CLASS FEATURES

- Improved serviceability by removing the need to detach support feet during fluid end swings
- Low conversion costs by maintaining most common components and consumables
- Bolted on stuffing box with push-off bolt holes for ease of installation and removal
- Suction manifold adapters available to match existing hardware configurations for GD SGWS and most competitor fluid ends
- Our proven Falcon Technology valve spring retainer reduces maintenance time for valve, seat, plunger, and packing changes.
- New stuffing box design allows for continuous tightening of packing nut to maximize packing life
- Improved geometry to extend fluid end life
- Offered in both 4.5 in. and 5 in. design for use with GD 3000 pumps
