

# Instruction Chariot

## 1. Adjust saddle height

By pulling the lever below the saddle up, it can be adjusted in height. If the range is not sufficient, you can adjust the position of seatpost by releasing the quick release on the frame.

## 2. Power on electric system

Power on the electric system by pushing and holding the red button on the battery for 3 seconds. Press the **⏻ button on the display** to turn off the motor system and battery.

## 3. Parking brake

The brakes can be locked for parking by pushing down the black lever and pulling the brake handle. Release the parking brake by pushing the red lever and put both levers back in the starting position.

## 4. Motor features (from stand still)

**Start assist:** Pull the left brake handle and use the throttle. When you release the brake handle, the bike will start rolling forward.

**Reverse:** Press and hold the red button and use the throttle.

*The lights will automatically turn on when you power on the electric system.*

## 5. Turn signals

The buttons to operate the turn signals are on the left handle. By using the black switch you can engage both turn signals simultaneously.

## 6. Box locks (mechanical)

The locks can also be operated using the key to unlock the black button and turning it. Make sure to lock the mechanical button after use.

## 7. Cargo nets

The box is equipped with cargo nets. These can be mounted several ways using the cutouts in the center pillar and/or the circular mounts.

## 8. Tire pressure

The tire pressure should be 3.25 bar (47PSI)

*Always lock the bike when leaving the bike.*
