5-Point Ligature-Resistant Locking Lever

Daisy™

Over-The-Door Alarm System

Multi-Bolt™ SR

Multi-Point Locking for Seclusion Rooms

Rachie™

Entry and Exit Control Systems

Securitech has answered the call for enhanced patient safety by creating the first ligature-resistant lever lockset and now the first non-institutional looking 5-point ligature-resistant Solis lever lock. Through close collaboration with patient care and safety leaders, Securitech has created effective over-the-door alarms, multi-point seclusion room locks and entry and exit control systems, customized to meet individual facility's operating needs. Securitech solutions have been reviewed and/or listed in the New York State Office of Mental Health Guide, VA Mental Health Environment of Care Checklist and the Design Guide for the Built Environment of Behavioral Health Facilities.

Thousands of Securitech door alarm and locking devices have been installed in VA Medical Centers, state psychiatric hospitals, mental health and rehabilitation facilities, detention facilities, and private facilities across the country.

 **SECURITECH®**
High-Security Locking Solutions

Securitech Behavioral Healthcare Solutions

A4L™
Ligature-Resistant Locksets

The first ADA compliant ligature-resistant lever handle, designed in collaboration with behavioral healthcare consultants. Works with traditional mortise or cylindrical openings, maintains a low profile with a smooth appearance and easy operation.

Solis™
5-Points Ligature-Resistant Locking Lever

5 points of attachment, Ligature-resistant lever handle door hardware provides the highest level of anti-tie, 5-point lever protection, while providing aesthetic hardware. The architectural design, combined with the unique lever tapering, remain the industry standards for lever safety.

Daisy™
Over-The-Door Alarm System

Nationally recognized as the leading product of its class, the DAISY ligature warning sensor system provides an aesthetically pleasing curved design resembling chair rail molding, and is used in conjunction with a smooth full length anti ligature continuous hinge.

Multi-Bolt™ SR
Multi-Point Locking for Temporary Restraint

Deadbolting the door at the top, center and bottom is the most effective way to prevent a violent patient from breaching a secured door. One turn of the key projects or retracts all the deadbolts simultaneously. The rods travel within the door. A variety of ligature-resistant levers may be used on the corridor side, and the interior is generally blank.

Rachie™
Entry and Exit Control Systems

Entry & Exit Control Systems that expand on the basic mantrap or sally port system. By using dual-locking technology, Rachie is a system that provides advanced operational security while meeting life-safety and Code requirements. Up to 4 doors can be included and are customized to the end-user's needs.
