

About Us

Heru Inc. (www.SeeHeru.com) has developed patented autonomous AI-powered vision diagnostics and augmentation software. This technology exceeds traditional standards of care in usability, cost, size, and portability. Heru is the only cross-platform solution with patents to autonomously diagnose vision defects and customize individual vision augmentation based on the user's unique vision defects.

Heru originated as a spinout from Bascom Palmer Eye Institute. In December 2020, Heru announced FDA registration and a seed round led by Fred Drasner, Maurice R. Ferre, M.D., Fred H. Moll, M.D., and a consortium of investors with extensive experience developing, launching, and scaling cutting-edge medical technologies.
