

Edition, release date	Key topics of 2022. Security & Safety Magazine (S&S)
S&S1, 01.04.22	Safety of fuel and energy facilities and dangerous production. Global trends of the digital age
	ACS for large facilities
	Wearable body cameras
	PSIM и information collection and processing systems: solutions for complex security
S&S2, 30.05.22	Safety of places with mass gathering
	Panoramic video cameras
	ACS for entrances: turnstiles, terminals for recognition and thermometry
	Import substitution in security systems. Local manufacturers
S&S3, 22.07.22	Digitalization of industrial enterprises and business processes. Automation and robotization of production. Internet of Things and artificial intelligence
	Data processing centers. Engineering infrastructure, fire security. Cost optimization
	Machine vision and artificial intelligence for production automation
	thermal imaging systems: equipment review, application practice and real opportunities
	Cybersecurity of enterprises under conditions of constant attacks

S&S4, 16.09.22	Intelligent technologies in utilities sector. Building automation
	IoT platforms and apps to manage smart homes
	Automatic systems of electrical power monitoring and metering
	Modern intercom systems
	Controllers for small ACS. Biometric locks
	Warning and evacuation systems in case of fire
S&S5, 18.11.22	Business centers, banks, offices. Security technologies in the new reality
	Secure remote access. Automation tools and data protection
	Smart parking for commercial real estate and public spaces
	Cloud services in security systems
	Videoconferencing. Equipment, optimal selection of solutions
S&S6, 03.02.23	Transport security. Infrastructure protection (facilities). Transport hubs. Solutions review
	Innovations of the year
	Monitoring systems of moving objects
	ACS: mobile contactless access
	Technologies of perimeter protection
	Data storage systems and platforms
	Fire alarm systems. Wireless solutions
