

asos

“We found Azure Sentinel easy to set up and now don’t have to move data across separate systems. We can literally click a few buttons and all our security solutions feed data into Azure Sentinel.”

—Stuart Gregg, Cyber Security Operations Lead, ASOS

Situation:

To help deal with daily cyberthreats, online retailer ASOS needed to gain a bird’s-eye view of all its security activities, spread across six teams and two separate security operation centers.

Solution:

Already an Azure user, the company opted to feed data from multiple security solutions into Azure Sentinel, using it as a single pane of truth for all security information and processes.

Impact:

With Azure Sentinel, ASOS has enabled more efficient and effective security processes, captured 3.7 billion events, generated 3,100 alerts, resolved 519 incidents, and reduced the time spent on case management and resolution by 50 percent.

Customer: ASOS

Industry: Retailers

Size: 4,000+ employees

Country: United Kingdom
