

AVANTI SLINGSHOT® AND ENFOCUS: ALIGNMENT ACROSS YOUR ENTIRE SHOP

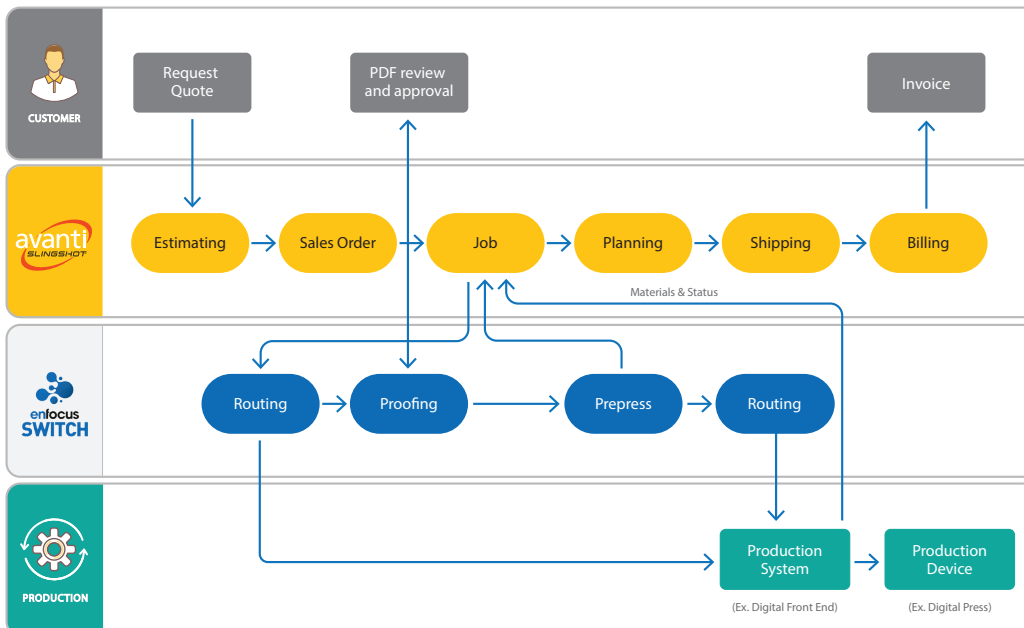

INTEGRATION WITH ENFOCUS SWITCH & PDF REVIEW MODULE

Enfocus Switch features an open architecture and a neutral file-format process that seamlessly integrate with Avanti Slingshot® to create an efficient PDF workflow.

Avanti Slingshot® sends job specs to Enfocus Switch, where the job is prepared for processing and proofing. Enfocus completely automates the PDF proofing process with the PDF Review Module, a simple yet powerful tool that simplifies email soft proofing and eliminates manual processes.

When proofing and processing are complete, Enfocus Switch sends production details back to Avanti Slingshot® via JDF. Slingshot® then updates the status of operations (milestones), creates cost entries for labor and material, and adjusts inventory for materials used on the job in real time.

The bi-directional communication between Avanti Slingshot® and Enfocus Switch is fully automated. User touch points and manual work related to entering job specs, managing production details, and producing proofs are completely eliminated.

ABOUT ENFOCUS

Enfocus provides modular and affordable tools to safeguard job quality and automate the entire production chain. Innovative solutions improve communication between design and production, and enhance productivity and predictability by automating routine tasks.

LET SWITCH DO THE WORK FOR YOU

- Automated receiving, sorting and routing for incoming jobs
- Automated PDF quality control with manual correction cycle
- Native layout documents converted to print-ready PDF files
- Automated receiving and verifying web-to-print jobs
- Online proof approval

BENEFITS AT A GLANCE

Automating your PDF job workflow shortens turnaround times, reduces the potential for errors and frees up hours that your staff can spend on more valuable activities.

Automated, Bi-Directional PDF Job and Production Data Flow

- Reduce labor costs by automating repetitive tasks
- Eliminate manual work associated with entering job and production details

Operational and Quality Improvements

- Automate email soft proofing; eliminate the manual process
- Stream high-resolution PDFs directly to customers
- Enjoy the benefits of a browser-based user interface

Improved Service Levels

- Route customer approvals quickly and directly to production
- Reduce turnaround times by moving files immediately to the right place
- Improve customer experience by viewing files "as they will print"

No more low-resolution PDFs attached to an email

- Files are uploaded to a web server and streamed to your customer

100% accurate PDF viewing

- You customer sees the actual file that will be printed

No additional software needed

- Customers view the files on their preferred web browser, eliminating worries about overprint, transparency settings, or client software
