

Best Doors & Windows

BACKGROUND

The customer is one of the leading manufacturer of various types and styles of Steel Doors and Windows with frames for interior and exterior use. They are one of the few manufacturers able to deliver both custom and standard products on the same order. Their ability to produce unique designed and decorated steel doors and windows with frames offers the architects a total design freedom.

FUJI ELECTRIC SOLUTION

The team of engineers from Fuji Electric visited the site to understand the operations and the requirements of the customer, based on this they suggested the installation of a 250 KVA Falcon 5000 UPS that will provide power back up to the Salvagini punching and bending machine being used by the customer that is developed for high flexibility and low setup times. Those machines are able to bend single pieces as well as small batches with the same precision and efficiency as series-produced parts in an economical way.
