

Truly Hospitable

SITUATION:

Hyatt is a global hospitality company with widely recognized, industry leading brands and a 150 year old tradition that stands for innovation and trust.

The client was using multiple numbers of 2, 3 & 5KVA inverters and batteries. These units totaling 26 and located at every corner on each of the seven floors, were proving to be a big maintenance challenge. The client at this point of time was unaware of the availability of high capacity inverters.

SECTOR:

Global Hospitality Services

PRODUCT:

Centralized Inverter Systems

SOLUTION:

The Consul Neowatt team met the Engineering Head at Hyatt Regency. On understanding the client's problem, the Consul Neowatt team suggested the replacement of all small inverters with high capacity inverters as a long term solution.

On commencing of the task of installation, the team realized that wiring for the load would be a problem. The Consul Neowatt engineers and the Hyatt personnel conducted a joint study of the entire load and wiring after studying which, the Consul Neowatt team offered the solution - installation of two centralized inverters of 125KVA capacity for the public area at the hotel and a 60KVA capacity inverter for the guest area. This solution would not only take care of current needs but would come with spare capacity to accommodate future load.

This solution proved to be a cost effective one as well.

RESULT:

The Purchase Order was raised by the client and Consul Neowatt engineers successfully completed the implementation. The Consul Neowatt team was delighted when they received the Customer Satisfactory Certificate.
