

# Co-Working Space

## THE PROBLEM

Our customer who is one of the leading MNC companies in the Co-Working space required a power back up for its new facility in Noida which is spread over 5 floors of the building in Noida. The space is occupied by many leading companies along with complete infrastructure and facilities. They have also included UPS power to all clients with in facility hence providing an uninterruptable power becomes more important to them for Servers and desk load.

## FUJI ELECTRIC SOLUTION

The team of engineers from Fuji Electric visited the facility and also studied the usage pattern at the site. Based on this they recommended the installation of a 300 KVA Falcon 7000M modular UPS in a standalone configuration.

## CUSTOMER NAME

A Leading MNC in the Co-Working Space

## INDUSTRY

Commercial Building

## APPLICATION

All Lighting and Facilities
