Arvoia | About Us

Arvoia are an AI company focused on the hospitality technology industry. Having brought AI to other sectors in travel such as car rental we are already underway to becoming the most important technology provider to the hospitality sector. The hotel industry is facing some stiff headwinds in terms of a change in demand pro les and volumes, competition from Airbnb, over- reliance on OTAs, staff shortages and critically a lack of real innovation in the digital customer journey for consumers. The Arvoia hotel AI platform completely reframes the digital customer journey. We enhance revenues, engage the guest, eliminate costs and outdated digital practices and drive real automated efficiency across the consumer booking journey. Importantly we achieve all this without any tech investment from the hotel and irrespective of the existing tech stack through a simple integration.

So in short Arvoia's platform is a single, elevating technology layer that uses AI and machine learning to understand customer behaviour and transform the existing, fragmented Hotel digital journey into a unified, curated and frictionless booking experience - resulting in dramatic proven increases in direct customers, revenue, engagement and efficiency.

Our technology, our team and our products are gaining global acclaim for our innovation and approach. Every new team member is carefully selected to ensure not only that Arvoia will continue to disrupt the travel industry but that each individual has a clear path to grow and develop within the role.

How does the role fit with Arvoia?

We are seeking a Senior Java Developer who can help shape the future of our product, serving consumers and major travel brands across the world.

What will I be doing

The right candidate will:

- Be a key part of the agile scrum team to design and develop proposed software solutions.
- Work closely with product owners to oversee requirements-gathering.
- Work closely with our data scientists to enable artificial intelligence through all aspects of our products
- Diagnose real-time issues to help identify their causes and manage corrective action
- Work with the latest cloud technologies (AWS) and design patterns (Microservices) to deliver scalable, performant technical products
- Contribute as a peer of the development team and IT team to ensure that solutions are optimal.
- Have a history of delivery excellence and be focused on action over analysis.
