

STATE OF THE MARKET

FEB. 17 - 23, 2022

Coin Metrics' State of the Market provides an overview of the cryptoasset market activity

A large, stylized logo consisting of the letters 'C' and 'M' in a light blue gradient. The 'C' is a thick, open circle, and the 'M' is composed of two thick, slanted vertical bars meeting at a sharp point at the top and bottom.

MARKET SUMMARY

Financial markets are fighting an uphill battle as international tensions reach a fever pitch amid an unprecedented clash between Russia and Ukraine. After officially recognizing two separatist regions of Eastern Ukraine as independent states, Russia has launched a “special military operation,” targeting its neighbor’s major cities and airports in an attempt to handicap Ukrainian defense capabilities. European economies are bearing the brunt of the impact— London’s FTSE 100 tumbled 3 percent, while Germany’s DAX 30 dipped 5 percent— but few markets are insulated from the effects of this conflict. The Dow is in a downward spiral, the ruble hit record lows against the dollar, Brent crude oil topped \$100 for the first time since 2014, and Bitcoin is teetering on the edge of \$35,000. While many pundits still expect the Federal Reserve to raise interest rates during next month’s FOMC, the board’s leadership has downplayed the likelihood of a steeper 50 bps hike, signaling a more restrained tightening regime as we head into a period of greater geopolitical uncertainty. Although the situation in Europe has taken center stage, North America has experienced its fair share of political drama over the week. After enacting the Emergencies Act and freezing protestor assets, Canadian regulators have zeroed in on Coinbase & Kraken, flagging tweets promoting self-custody from both exchange CEOs. The U.S. Department of Justice is also ramping up crypto enforcement, announcing the FBI’s new ‘Virtual Asset Exploitation Unit,’ focused specifically on blockchain analysis and digital asset seizure. It wouldn’t be a week in crypto without yet another high-profile exploit— OpenSea users are reeling from an apparent ‘phishing attack,’ with nearly \$1.7M in NFTs stolen across at least 32 individuals. In coming weeks, cybersecurity and on-chain surveillance will likely remain relevant topics, especially as the West weighs whether to isolate the entirety of Russia’s banking infrastructure.

PRICE (CMBI CONSTITUENTS)

Coin Metrics' Reference Rate price calculated using a transparent, independent methodology robust to manipulation and derived from high quality constituent markets. Data based on 4pm EST NYC close.

USDC	+0.10%	35.16	35.25	35.08
BUSD	-3.13%	26.42	26.79	25.95
GUSD	+24.70%	34.17	40.97	30.92
HUSD	+21.62%	151.82	166.54	130.50

DATA EXPLAINER (P.1)

PRICE

Closing Price (4PM), High Price, Low Price, % Change in Price for each asset for the previous month and the previous 52-week period. Price represents Coin Metrics' Reference Rate, which is calculated using an independent methodology robust to manipulation. [More information](#) on Coin Metrics' Reference Rates.

CMBI BITCOIN

Daily level for Coin Metrics Bletchley Index (CMBI) Bitcoin for the previous month. CMBI Bitcoin tracks the price and performance of Bitcoin by sourcing BTC/USD market prices from numerous global liquidity venues. As of 2/20/2022 constituent markets in the CMBI Bitcoin were Binance.US, Bitstamp, Bittrex, Coinbase, Gemini, itBit and Kraken. [More information](#) on Coin Metrics Indexes.

CMBI ETHEREUM

Daily level for CMBI Ethereum for the previous month. CMBI Ethereum tracks the price of Ethereum by sourcing ETH/USD market prices from numerous global liquidity venues. As of 2/20/2022 constituent markets in the CMBI Ethereum were Binance.US, Bitstamp, Bittrex, Coinbase, Gemini, itBit and Kraken. [More information](#) on Coin Metrics Indexes.

CMBI 10

Daily level for CMBI 10 for the previous month. The CMBI 10 is designed to measure the performance an investor would expect from investing in a diversified basket of cryptoassets weighted by their free float market capitalization. The 10 largest cryptoassets, defined by an asset's expected 10 year future market capitalization, are selected as the index constituents. [More information](#) on Coin Metrics Indexes.

BTC USD PERPETUALS AND DATED FUTURES AS OF WEEKLY CLOSE PRICE

Total listed BTC futures/perpetual swaps on each exchange with a close price that week. A perpetual contract is a special type of futures contract, which is an agreement to buy or sell a cryptoassets at a predetermined price at a specified time in the future. Perpetuals do not have an expiry date, so one can hold the position for as long as they like.

TRADING DIARY

Total Volume, which is the total traded volume for the previous week for the cryptoassets under Coin Metrics Reference Rate Coverage.

Adv. Volume is the total traded volume for the previous week for all cryptoassets under Coin Metrics Reference Rate Coverage that had closing prices higher than their opening prices for the week.

Decl. Volume is the total traded volume for the previous week for all cryptoassets under Coin Metrics Reference Rate Coverage that had closing prices lower than their opening prices for the week.

Advances are the number of cryptoassets that had closing prices higher than their opening price for the week.

Declines are the number of cryptoassets that had closing prices lower than their opening price for the week.

The ratio of advances to declines can be used to determine the breadth of market direction. For example, higher advance/decline ratios indicate that advancing market direction is driven by a broader set of cryptoassets.

EXCHANGE SPOT VOLUME MARKET SHARE

Market share of exchange spot volume for the previous week for the Markets covered by Coin Metrics.

BASE ASSET SPOT VOLUME MARKET SHARE

Market share of base asset volume for the previous week for the top 25 cryptoassets based on volume under Coin Metrics Reference Rate Coverage.

% PRICE CHANGE

Percentage change in price over the previous week for cryptoasset gainers and losers in Coin Metrics' Reference Rate and Market Cap coverage universe. Coin Metrics' price/Reference Rate is calculated using an independent methodology robust to manipulation. [More information](#) on Coin Metrics' Reference Rates.

DATA EXPLAINER (P.2)

OPEN INTEREST

The sum of all reported future open interest from the spot markets in Coin Metrics' coverage in units of U.S. dollars.

FUTURES VOLUME

The sum of all reported future volume from the spot markets in Coin Metrics' coverage in units of U.S. dollars.

FUNDING RATES

Funding rates are a mechanism that exchanges use to ensure that perpetual futures trade at a price that is close to the price of the underlying spot markets. The funding rate is used to calculate the funding fee which long position holders pay short position holders, or vice versa, as a way to incentivize market participants to take positions that keep perpetual futures prices close to the underlying.

PERPETUAL (PERP) OPEN INTEREST

The sum of all reported open interest from perpetual futures markets in units of U.S. dollars. [More information](#) on Coin Metrics' futures coverage universe.

NON-PERPETUAL (NON-PERP) OPEN INTEREST

The sum of all reported open interest from non-perpetual futures markets in units of U.S. dollars. [More information](#) on Coin Metrics' futures coverage universe.

MARKET CAPITALIZATION (MARKET CAP)

Market Capitalization (Market Cap) is an asset's on-chain supply (Coin Metrics' Current Supply) multiplied by its price. Current supply is the sum of all native units ever created (i.e., issued) and visible on the ledger.

Market cap is the most commonly used measure of a cryptoasset's total market value. However, market cap can be misleading because it treats each unit of supply equally. Unlike with traditional equities, significant amounts of cryptoassets are permanently lost or go unclaimed, yet are still counted as part of the on-chain supply.

REALIZED CAP

Realized cap is calculated by valuing each unit of supply at the price it last moved on-chain (i.e. the last time it was transacted). For example if a coin was last transacted three years ago when the price was \$2,500, that particular coin would be priced at \$2,500 instead of the current market price. The realized cap is the total sum of all coins priced this way.

Realized cap can provide a more realistic representation of market capitalization and discounts coins that are lost or out of circulation.

MARKET TO REALIZED VALUE (MVRV)

MVRV is the ratio of a cryptoasset's market cap (aka market value) to realized cap (aka realized value).

It can be used to help gauge cryptoasset market tops and bottoms. Historically, periods where Bitcoin's MVRV has dropped below 1.0 have coincided with market bottoms and in hindsight have been the best times to buy.

DATA EXPLAINER (P.3)

ACTIVE ADDRESSES

Active addresses is the unique number of addresses that either send or receive a transaction, calculated daily.

Active addresses can serve as a rough proxy for daily active users. However it's not an exact measurement - a single user can have many addresses, and a single address can be owned by many users.

FREE FLOAT SUPPLY

Coin Metrics' free float supply takes many of the best practices from traditional capital markets and applies them to cryptoassets to identify supply that is highly unlikely to be available to the market in the short to mid-term. In doing so, free float supply provides a better approximation of a cryptoasset's liquidity and market capitalization compared to standard supply measurements. [More information](#) on Coin Metrics Free Float Supply.

TRANSACTION COUNT

Transaction count is the measure of the number of transactions either sent or received on a daily basis. Similar to active addresses it is a measure of network activity but it is susceptible to some spam and other types of manipulation.

TRANSFER VALUE, ADJUSTED

Transfer value is the total amount of a cryptoasset transferred over the course of a day, denominated in USD. We adjust raw transfer value to remove noisy "non-economic" behavior such as self-sends and spam.

ADDRESSES WITH \geq \$1

The count of addresses that hold at least \$1 worth of a cryptoasset. This gives a rough estimation of the amount of users that hold an asset, with the same caveats that apply for active addresses.

ADDRESSES WITH \geq \$1M

The count of addresses that hold at least \$1M worth of a cryptoasset. This gives a rough estimation of the amount of institutional investors that hold an asset, with the same caveats that apply for active addresses.

TETHER PREMIUM/DISCOUNT TO USD

30-day moving average of Tether's price YTD premium or discount to USD. Price represents Coin Metrics' Reference Rate, which is calculated using an independent methodology robust to manipulation. [More information](#) on Coin Metrics' Reference Rates.

TOTAL STABLECOIN SUPPLY

Total Stablecoin Supply based on Coin Metrics' Current Supply, which reflects all native units ever created and visible on the ledger (i.e., issued). Tether supply includes Tether Omni, Tether ETH, and Tether Tron. Other Stablecoins include PAX, DAI, USDC, BUSD, GUSD, HUSD, TUSD, and SAI.

MARKET CAPITALIZATION

See prior explanation.

TRANSFER VALUE, ADJUSTED

See prior explanation.

TRANSACTION COUNT

See prior explanation.

MEDIAN TRANSFER VALUE

The median USD value transferred per transfer (i.e., the median "size" in USD of a transfer) between distinct addresses.

VELOCITY

The ratio of the value transferred (i.e., the aggregate "size" of all transfers) in the trailing 1 year divided by active supply in the trailing 1 year.

It can be thought of as the rate of turnover - the number of times that an average native unit among the active supply has been transferred in the past 1 year.
