

ADVANCING THE SERVICE OF MANAGED

Vulnerability Management Services

Deepwatch believes that security is a collaborative process. We work closely with our customers to establish strong foundations for maturing Security Operations (SecOps) programs. Our cloud SecOps platform and relentless customer focus have redefined the managed security services industry. We integrate best-of-breed security products including Security Incident and Event Management (SIEM) and Security Orchestration Automation and Response (SOAR) with our unique IP to automate security response and leverage our team of experts via our high-touch squad model. Deepwatch's Vulnerability Management Services serve as a baseline to collaborate with our customers to discover the critical assets, threats, and vulnerabilities relevant to their organization. Deepwatch provides the people, process, and technologies to fully or partially administer vulnerability management programs for our customers.

Reduces your organization's cyber risk by identifying and categorizing network weaknesses and potential entry points for attackers. Our methodology ensures that you have clear visibility into the vulnerabilities that pose the biggest risk to your organization. We help identify the barriers that prevent you from successfully tracking, patching, and remediating vulnerabilities.

Deepwatch initiates every engagement by collaborating with you and your team to build consensus on how vulnerabilities will be identified, prioritized, remediated, and measured. Throughout your vulnerability management journey, we provide clearly defined metrics to continually identify present risks and overall program maturity and progress.

We also provide patch management advice and prioritization to reduce attack surfaces and cyber risk to your organization. This is accomplished by prioritizing vulnerabilities that could provide immediate impact to the security of your organization.

Visibility and measurement of your organization's assets, threats, and vulnerabilities

Insights into specific changes that could impact the security of assets in your environment

Rapid response to vulnerability exploits through risk-based prioritization

Deepwatch Vulnerability Management Service Components

- Vulnerability Assessments
- Vulnerability Prioritization
- Vulnerability Risk Reporting
- Vulnerability Program Management

Vulnerability Management Services

Vulnerability Management Services Benefits

Vulnerability program management:
Fully managed end-to-end vulnerability management program development and administration

Risk-based remediation:
Vulnerability and patch remediation efforts prioritization by customer-specific risk-based scoring

Asset identification:
Complete asset visibility

Flexibility and Scalability
Services tailored to your organization's specific needs

Asset profiling:
Assets profiled by function, services, environment, lifecycle & more

Remediation Guidance:
Assistance to infrastructure, application, or business owners for remediation of vulnerabilities.
