

“The combination of DMI and SDHI chemistries makes this a great candidate to incorporate into your fall and spring fungicide program because there will be activity against several important diseases at key times.”

David McCall, Ph.D.
Virginia Tech University

CREATE YOUR OWN MASTERPIECE WITH KALIDA™

Kalida™ fungicide is a **powerful premix** that provides a complete protection option against multiple troublesome diseases at the same time. With the combined power of two unique active ingredients, Fluindapyr – a new and novel FMC SDHI fungicide – and next-generation DMI, Flutriafol, Kalida™ provides complete protection against Anthracnose, Brown Patch, Dollar Spot, and Fairy Ring. As a foundation fungicide, Kalida™ provides rapid uptake, longevity, and controls your toughest diseases as a standalone or part of a program.

“Kalida™ fungicide consistently provided excellent control of dollar spot on creeping bentgrass in our trials over 3 years. This is particularly impressive since the study site has documented SDHI insensitivity to dollar spot, as well as some level of reduced sensitivity to DMI fungicides. Kalida™ fungicide also consistently provided excellent control of brown patch on colonial bentgrass”

Bruce Clarke, Ph.D.
Rutgers University

KEY DISEASES:

- Anthracnose
- Brown Patch
- Dollar Spot
- Fairy Ring

Kalida™ also controls numerous other labeled diseases commonly found in cool-season turfgrasses

LABELED USE SITES:

- Golf Courses
- Commercial sites
- Industrial sites

FRAC 7 + FRAC 3 = A PERFECT 10

Fluindapyr is a new and novel succinate dehydrogenase inhibitor fungicide (SDHI). Its unique pyrazole carboxamide structure and methyl group give control of Rhizoctonia species as well as leaf and patch diseases.

Paired with flutriafol, the combined AI's reach level of control and spectrum that's hard to beat.

ANTHRACNOSE CONTROL

Anthracnose Control

J. Inguagiato, Ph.D. | University of Connecticut
 Initial applications made May 25, 2018
 14-day intervals - 7 applications
 Poa annua putting green

"It is exciting to have 2 new fungicide active ingredients in the line-up against fairy ring. In my field trials, Kalida™ fungicide was safe with no issues in terms of turf injury or phytotoxicity."

Mike Fidanza, Ph.D.
 Penn State University

Fairy Ring Control

M. Fidanza, Ph.D. | Penn State University
 Initial applications made June 18, 2019
 Kentucky Bluegrass Rough
 28-day intervals - 3 applications

All treatments applied with a wetting agent at 6 fl oz/1000 ft²
 1 = No symptoms;
 9 = Very severe Type I symptoms

BROWN PATCH CONTROL

Brown Patch Control

B. Clarke, Ph.D. | Rutgers University
 Initial treatments applied June 2, 2020
 14-day intervals; Tekken applied on 21-day intervals
 Colonial Bentgrass

Brown Patch
 Untreated

Brown Patch
 Treated with Kalida™ fungicide

Paired with flutriafol, the combined AI's reach level of control and spectrum that's hard to beat.

TAKE ALL ROOT ROT CONTROL

Take-all Root Rot Control

Treatment (fl oz/1000 sq ft)

J. Kerns, Ph.D. | NC State University
Initial treatments applied August 28, 2019
28-day interval; 2 fall applications followed by 2 spring applications
Bermudagrass Green

MINI RING CONTROL

Mini Ring Control (Leaf & Sheath Blight)

Treatment (fl oz/1000 sq ft)

J. Roberts, Ph.D. | Clemson University
Initial applications made June 11, 2020
14-day interval; 4 applications
Bermudagrass Green

"The results from our studies have made me quite confident that Kalida™ fungicide would be an excellent product to control Bipolaris leaf spot and I would have no problem recommending Kalida™ to control Bipolaris leaf spot."

David McCall, Ph.D.
Virginia Tech University

Bipolaris Leaf Spot Control

Treatment (fl oz/1000 sq ft)

D. McCall, Ph.D. | Virginia Tech Univ.
Initial applications made August 28, 2018
14-Day Interval - 4 applications
'MiniVerde' Ultradwarf Bermudagrass Green

"Kalida™ fungicide performed very well in our studies. It was similar to Navicon and Maxtima in a trial we conducted in 2019. Kalida™ was very safe on ultra-dwarf Bermudagrass."

Jim Kerns, Ph.D.
North Carolina State University

"Kalida™ performed very well in trials for large patch... I would think a rotational application strategy with Kalida™ and Fame would be an excellent option for superintendents. This combination will also provide protection from other pathogens while providing excellent control for large patch."

Brandon Horvath, Ph.D.
University of Tennessee
