

THE FUTURE OF SURFACE PROTECTION

BUSINESSES

Safeguard your business with the most comprehensive surface hygiene solution on the market.

One application of Nordic Chem coating will provide up to 30 days protection against bacteria and viruses.

SUSTAINABILITY

The Nordic Chem coating will protect surfaces from corrosion and abrasion, reduce the spread of harmful pathogens and prevent the overuse of corrosive disinfectants. From just one application, Nordic Chem enables businesses to implement a sustainable surface protection solution for now and into the future.

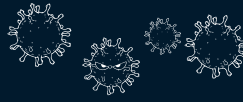

PROVEN FORMULA

Nordic Chem has been thoroughly tested and certified by independent UK and European laboratories to EN and ISO standards. Comprehensive, real world studies have also been conducted, from onsite ATP tests to culture slide swab testing. Businesses can be assured of a proven formula.

LONG TERM ANTIMICROBIAL TECHNOLOGY

How it works?

The coating creates an invisible protective layer of nano-spikes.

The virus is attracted to the nano-spikes.

The nano-spikes penetrate the viruses membrane which inactivates the cell.

24/7 PROTECTION AGAINST THE HUMAN CORONAVIRUS

- Effective up to 30 days
- Antiviral
- Antibacterial
- Applicable to all surfaces
- Non irritant
- Water based
- Non corrosive
- Anti odor

COMMITTED TO PROTECTING YOUR BUSINESS.

Nordic Chem Antimicrobial is a sustainable surface hygiene solution making your premises a more hygienic environment 24/7.

THE FUTURE OF SURFACE PROTECTION

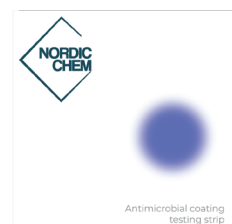

AWARENESS INITIATIVE

A facility treated with Nordic Chem will be eligible to display awareness stickers. By promoting the measures taken by the business to increase the safety of the occupants, it instills well-being to customers, employees, patients and contractors.

INSTANT TESTING

To ensure the Nordic Chem coating is fully active 24/7, all installers are equipped with testing kits. This allows applicators and the business to instantly test, at any time the presence of the antimicrobial coating on the surface. The testing kit takes the guesswork out of establishing the coatings presence on a surface. It provides a clear visual and reliable representation of the treatment in action.
