# Maximize Capacity and Eliminate Waste with Factory Analytics

Start improving today by empowering the people on your factory floor to make use of data that you're already collecting.

All Your Factory Data In One Place

Store, cleanse, and enhance data from machines and other critical systems like ERP, MES, and QMS to make it easily accessible and secure.

Built For The People Who Can Act

We provide actionable insights for the supervisors, engineers, and operations teams who can best drive change in your factories.

Ready-To-Use Visualizations And Analytics

Our tools are built to work out of the box. There's no need for programming or added services to get value and reduce the burden on IT teams.

ODEN TECHNOLOGIES

Empower Your Teams to Use Their Data

Oden's platform not only creates a single source of truth for all the data your teams need, but also enriches your data with Machine Learning and Big Data tools to enhance its utility for your teams.

Process Optimization

Allow engineers to more quickly and effectively find the root cause of problems and optimize processes by empowering them to easily process millions of data points at once using our platform.

Plant Operations

Provide supervisors, operators, and other operations users full visibility on performance and alerting on abnormalities so that they can identify potential problems earlier and fix them faster.

Performance Management

Arm managers and executives with a clear and consistent picture of performance for KPIs across locations. Our tools go beyond simply measuring production to discover real opportunities for improvement and identify the most impactful places to focus your resources.

MAKE MORE. WASTE LESS. INNOVATE FASTER.
