LABWARE • JUNE 20 – 24

CEC 20 22

HILTON • PRAGUE

It's Back!

It is almost two years since the COVID-19 pandemic began and dramatically changed our lives. It has been a difficult period for everyone, but business is beginning to return to normal and we are excited to announce the return of the European CEC planned for 20-24 June 2022, in Prague.

We consider the CEC a key event enabling us to interact with our customers, share knowledge and provide training, allowing you to get the best value from your LabWare system. The multi-day programme will include presentations, case-studies and industry-specific focus sessions as well as a comprehensive schedule of training sessions.

We will continue to monitor the status of COVID-19 and adjust the format to apply recommended safety measures for meetings and any social activities. We will work hard to ensure the meeting will deliver value, whether you are IT, QA, an administrator, a system owner or a business user. We equally welcome those who are experienced with LabWare and those just embarking on a new project.

REFRESH YOUR KNOWLEDGE

We have been busy these last two years! LabWare's product and service offerings have evolved and expanded. We have new cloud-based solutions and LabWare Mobile is opening a range of new and exciting possibilities for your business. The CEC provides a comprehensive range of training courses integrated with the formal program of presentations. The training will cover LabWare LIMS, ELN, Mobile and pre-configured applications/solutions. The training is suitable for a wide range of skill levels and is a major benefit of the time you invest attending the meeting.

MAINTAIN COMPETITIVENESS

Modern business competes in a fast-moving global market. Your LabWare system is a critical application for your business that will typically have a 15-to-20-year operational lifespan. Your system will be expected to adapt to future business challenges as they arise. Applying efficient, cost-effective solutions is key to helping your organisation maintain operational competitiveness and return on investment. The CEC allows you to monitor industry trends and maintain awareness of best-practices and practical solutions to everyday challenges other customers may have faced.

EXPAND YOUR NETWORK

The LabWare global user community comprises over 1600 companies and is a rich source of knowledge. Thousands of laboratories worldwide use LabWare's software on a daily basis, and although these systems are used in a wide range of industries, all are based on the same LabWare product platform, and you share a common interest. Focus groups and workshops at the CEC provide a great opportunity to network with colleagues and establish long-lasting contacts to share knowledge in a mutually beneficial way.

PLEASE MARK YOUR CALENDAR!

We understand you may be unsure of how COVID-19 might influence travel in 2022, but we encourage you to put the CEC in your calendar. The LabWare CEC is a unique event and has become the largest Lab Informatics meeting in Europe. Your participation and the feedback provided to LabWare during the meeting is extremely valuable to us and we strive to ensure you and your company derive maximum value and enjoyment from the meeting. Our last CEC in Istanbul, in 2019, attracted over 500 delegates, and we are hoping to match this in Prague. We will continue to monitor the status of COVID-19 and provide updates on the meeting format in the coming months. We very much hope you can join us in Prague!
