

AidenBot Automates Your Tedious IT Tasks

Aiden is a modern, intelligent software packaging and deployment solution for Microsoft Windows designed to hyperautomate patch management, endpoint configuration, and security. Aiden's AI-bot scales engineering work and integrates with any deployment tool, providing the content required to enforce desired state configuration and enhance compliance.

Here's what Aiden can do for you:

- HARDWARE DEPLOYMENT**
 - Autopilot / Intune deployments (home - deployed machine setup & maintenance)
 - Deploy / setup / build new machines
 - Bare-metal deployments
 - Rebuild / Repurpose machines
- CONFIGURATIONS**
 - OS configurations
 - Software
 - PC configuration changes (EX: Accounting -> Marketing)
 - Machine refreshes (mass redeployment)
- SOFTWARE DEPLOYMENT**
 - Auto-targeting by department, location, device type, etc.
 - Dependency handling
 - Custom software deployments and configurations
 - Microsoft Store applications
 - Vulnerability remediation
 - Security tools
 - Language packs, regional settings, & keyboard layouts
 - Microsoft LAPS and other endpoint hardening tools
- UPDATES & UPGRADES**
 - Microsoft Windows
 - Software
 - Microsoft Store applications
 - Plug-ins
 - BIOS, drivers, & firmware
- REMOVALS & ROLLBACKS**
 - Cleanly removing software
 - Software removals like bloatware
 - Switching security tools (or any other tool)
 - Cleanly removing malware-detection tools
 - Downgrading software to a previous version
- AND MORE...**
 - Ransomware / disaster recovery / incident response
 - Windows VDI management
 - Managing your PXE boot (network boot) service
 - Maintaining your Windows Preinstallation Environment (WinPE)
 - Documenting your standards for Windows PCs, servers, and VDI

Sound Unbelievable?

See it to believe it.
