

VIRTI

Improving Human Performance.

A Solution for the Cockpit, On Ramp, Maintenance, and Beyond

virt platform

Virti uses VR, AR, artificial intelligence and game design to help employees learn faster and remember training for longer.

Interactive Video

Our cloud-based video platform enables you to store and manage interactive 2D and VR training videos for your organisation.

AI Powered Virtual Humans

Drive behaviour change in your organisation with AI-powered virtual humans to train soft-skills.

Feedback

Our feedback suite allows for real-time employee and customer feedback to be collected & analysed from within the platform.

FOR PILOTS

Master specialist skills through repetition without extra costs

VR can reduce training time by 40% and improve performance by 70%.

VR is flexible - 58% of employees prefer to learn at their own pace and in their own time. Use Virti to augment what is done in the simulator using interactive video and virtual humans as co-pilots or trainers.

FOR ON THE RAMP AND MAINTENANCE TEAMS

Accurate, repeatable and standardized training of new staff (and re hired staff) who have complex roles

Immersive training is proven to enhance quality, processing speeds, and lower error rates.

With Virti's interactive video we put the trainee in a simulation where there is real danger, e.g. on ramp are tying up equipment and introducing risk of damage to equipment including aircraft and the trainee - Virti can remove this real risk. This also applies to all trades including baggage loaders.

The need to hire new or re-hire requires quality training at scale and given that its often in situ with equipment at the moment is a bottleneck and will hold back the recovery.

NO-CODE CONTENT CREATION

Use immersive technology and AI to scale face-to-face experiential training fast.

1

Create

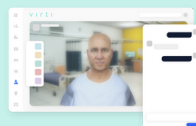

Use our no-code creation suites to create effective learning content for your people.

2

Scale

Distribute your learning content to learners via our Virti App on demand, accessible at any time, on any device.

3

Analyse

Capture detailed qualitative and quantitative data to track and tailor experiences for the individual.
