

# Desktop GP - Simplifying 1-1 engagement

Our clinician toolbar, Desktop GP, is designed for GPs by GPs. It's a platform that makes video consultations easy to arrange and facilitates a space for patients to send messages and photos before a consultation.

Mjog Desktop GP is a quick, simple and secure patient communication tool, which allows any clinical system users (EMIS Web or TPP's SystemOne) to send patient messages by accessing the on screen patient's contact details during a consultation.

What you can do with Desktop GP:

- Send SMS messages to patients
- Initiate video consultations using Mjog video
- Code messages back
- Send a series of SMS messages using the Sequences add-on
