WHEN ALL ELSE FAILS: CAPTURING RANSOMWARE WITH UNITRENDS

Your firewall could be a decade old or it could be a state-of-the-art next-generation firewall with all the trimmings. Regardless, it is very likely that an unauthorized intrusion will slip through. The question then becomes “can we detect it before it wreaks havoc?”

Is This for Me?

School districts have access to hundreds of security solutions. On average, schools have anywhere from four to seven different solutions that make up their whole security network.

What makes Unitrends different from the rest? How can you be sure it suits your needs? Ask yourself these questions:

- Do your systems provide automatic daily security reports?
- Is your data backed up every day?
- When you transfer data offsite, is it secure?
- Does your security system consist of a mix of software, hardware and cloud solutions?

If you answered “no” or “I’m not sure” to any of the questions above, Unitrends is right for you.

24/7 VISIBILITY

DAILY ALERTS

Unitrends security manager scans servers, data and networks every 24 hours and automatically alerts you to any threats.

MACHINE LEARNING

AI identifies bizarre activity or unauthorized changes like new profiles, changes to access, backup errors and more.

SMART MONITORING

Unitrends uses smart tags to collect information about specific users, assets and settings for more in-depth reporting.

More Than Software

Other security solutions are just software with single-point functionality. Unitrends is a physical device that integrates with your data center, automatically syncing your appliance to the cloud. Cloud backups are automatic and included with the solution.

Get Started with NIC Partners

NIC Partners has education-focused engineers that can help you assess your environment to determine if Unitrends is the right solution for your needs. If you're worried about ransomware, don't hesitate to contact us
