

# Build Confidently with Join.

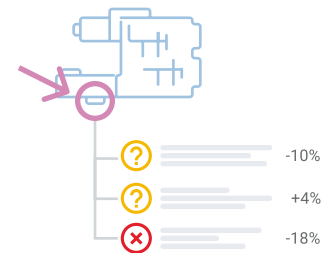

Join is the only decision-making platform that supports owners' and developers' visibility into decisions and changes over the course of a project. Collaborative project delivery methods now have a new tool to target value from the beginning.

## Reduce Risk

Collaboration and transparency increase your team's understanding of the project scope from preconstruction throughout construction, keeping project costs and timelines more predictable throughout construction. Join facilitates key project decisions and logs conversations all in one place to reduce mistakes and keep everyone on the same page.

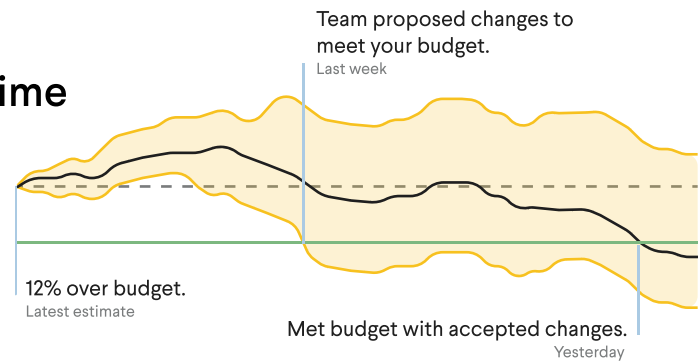

## Early and Informed Decisions

Every project decision is tied to supporting documents, explanations, and costs provided by your team of experts. See how those decisions impact project design and costs early to make faster, more confident decisions.

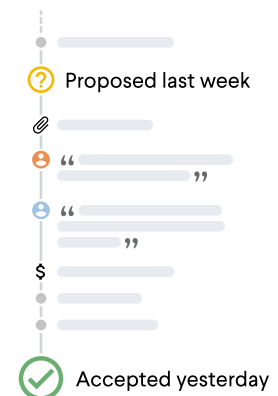

## Get a Pulse on Projects in Real-Time

Join transforms complex project data into personalized, easy-to-understand reports so you can see at a glance if the project is on track or has pressing issues needing to be resolved. You can then instantly and confidently communicate project needs to other decision-makers without leaving Join.

## Simplify Project Tracking

Join makes massive email threads and hunting for attachments a thing of the past, providing a single location to capture all the project information provided by the team. This allows you to quickly see what, when, and why project decisions were made - and who made them - on every project because they're all saved in Join.
